ELECTROSTATIC MEMORY TUBES AND THEIR APPLICATIONS. [1963] [26]p. (figs. tables omitted)
11 refs.

Order from SLA \$2.60

63-16059

Trans. of unidentified French? article, n. p., n. d.

DESCRIPTORS: *Electrostatics, *Storage tubes,
*Image tubes, Design, Operation, Electron tubes.

The author first shows the place occupied by the various electrostatic memory tubes in the general classification of image tubes. The article then comprises a first general section restating the principles of an electrostatic memory, together with the fundamental processes regarding the deposition of electric charges on an insulator by means of a fine electron beam. In the second section, the various types of memory tubes already developed are passed in review (Engineering--Electronic, TT, v. 10, no. 4) (over)

DESCRIPTORS: *Manganese compounds, *Dioxides,
*Electrolysis, Cathodes, Manufacturing methods

A method is proposed for the perfection in the production of manganese dioxide by electrolysis characterized by the fact that a systematic application of a double cathode is used. This double cathode has one part which is in direct contact with the bath and another part which is covered with natural MnO_2 . Or, what results in the same, a single cathode of which one part of the surface (Engineering--Chemical, TT. v. 10, no. 12) (over)

Trans. of French patent 903,462, gr. 6, cl. 4, appl.
10 Nov 43, granted, 15 Jan 45, pub. 5 Oct 45.

A high-power seaplane is described with means for vertical take-off and landing on ground, vertical alighting on water, stationary hovering, braking at low air speed and reverse motion. The aircraft consists of a hull and two monoplane wings, preferably curved upwardly, one disposed forward of the general center of gravity of the plane and the other behind the center, considering the plane in the direction of flight. The seaplane comprises lift propellers complementing the action of tractor propellers and also propulsion units whose axes may be oriented into longitudinal vertical plane. The total motive power of the plane is collected in an engine compartment or a central power station (Engineering--Aeronautical, TT, v. 5, no. 4) (over)
